

# AUTOMATIC FEEDER

The automatic feeder for rice cakes allows to collect the cakes coming in random order from the production presses in order to send them to the packaging system channeled on edge.

## FEATURES:

The rice cakes automatic feeder is composed of:

- Continuity dosing system for the browsing and channeling of the cakes in a single line
- A set of vibrating channels providing to send the cakes on edge to the volumetric portioning
- A volumetric portioning system with variable adjustment of the length for preparation of the cake portion to be sent to the packaging system

The automatic feeder according to its conformation is able to receive and handle from a minimum of 6,000 to a maximum of 40,000 cakes/hour.
