

AUTOMATIC RAW MATERIAL CONVEYOR SYSTEM

The chain conveyor system are used for the transfer of raw materials from the mixer to the hopper of the puffing machines.

The raw material discharged from the mixer, is conveyed to the loading hoppers of the conveyor which, thanks to the movement of the chain, moves the cereal/micropellets from the loading point to the hoppers of the processing machines.

Within the production plants for puffed cakes and snacks, the mixing of raw materials and their transfer to the loading hoppers of the processing machine is completely automated and managed by PLC.
